

6 7 8 9 10

The figure shows two 3x3 grids used for arithmetic. The first grid represents the addition of 43 and 11. The top row contains 4 and 3. The middle row contains 1 and 1. The bottom row contains 5 and 4. A dashed line is at the bottom. The second grid represents the subtraction of 32 from 54. The top row contains 5 and 4. The middle row contains 3 and 2. The bottom row contains 2 and 2. A dashed line is at the bottom. Arrows point down from the top row of each grid.

	4	3
+	1	1
	5	4

	5	4
-	3	2
	2	2

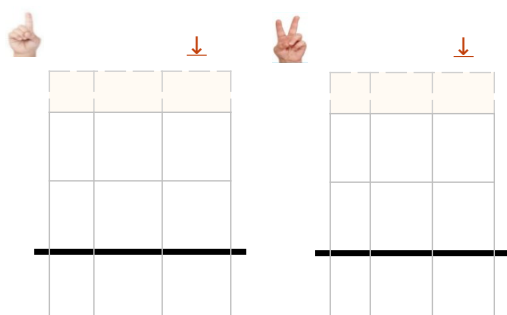

The diagram shows a piggy bank with two arrows indicating the flow of money. Arrow 1 points into the piggy bank, and Arrow 2 points out of it. This illustrates the process of saving and then withdrawing money.

A large white piggy bank is shown. A hand on the left is inserting four green coins (labeled 10, 10, 1, 1) into the slot. A hand on the right is withdrawing two orange coins (labeled 10, 1) from the slot. A large pink arrow points upwards from the left side, and a large pink arrow points upwards from the right side.

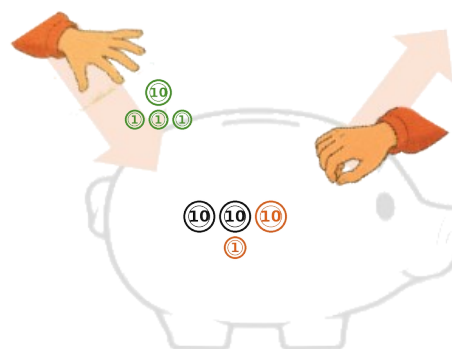

A cartoon illustration of a white piggy bank. A hand on the left is dropping four coins into the slot: two green coins labeled '10' and two red coins labeled '1'. A hand on the right is pulling out four coins: two green coins labeled '10' and two red coins labeled '1'. This illustrates the concept of cash flow, where the left side represents inflows (positive) and the right side represents outflows (negative).
