

The diagram illustrates a transformation or mapping between two sets of data. On the left, a small 2x1 grid represents a subset of data. On the right, a larger 4x1 grid represents a superset of data. A horizontal line separates the two grids, and a curved arrow indicates a relationship or flow from the smaller set to the larger set.

A 10x10 grid with a horizontal line at the top and a vertical line on the left. A small box is attached to the left line, and a larger box is attached to the top line. A curved arrow points from the top line down to the left line.
